

We understand the importance of a clean environment. Therefore, we commit ourselves to protecting the environment so we:

- constantly develop and improve the our environmental management system,
- prevent environmental pollution,
- concern for reducing both the impact of business process on the environment as well as reducing the impact of transformers on the environment during the operation and after the end of their service life.

CORE OBJECTIVES

- To develop and produce transformers with minimum impact on the environment.
- Identify the significant environmental aspects, measure their effects on the environment and, when necessary, take action.
- To use only components and raw materials that do not burden the environment excessively.
- Reducing the consumption of energy and raw materials per unit of output, thereby reducing the amount of waste and other identified environmental impacts.
- To collect separately and prepare for recycling the resulting waste as much as possible.
- Implement the controlled decomposition of transformers at the end of their service life and ensure recycling of used materials as far as possible.

RESPONSIBILITY OF MANAGEMENT

In order to continually reduce environmental impact, the company's management is responsible for:

- implementation of activities to achieve the objectives of the Environmental Policy set out in the company's strategy and annual plans,
- compliance with requirements of environmental legislation and other obligations, which concerns the business process,
- compliance with relevant environmental requirements of customers and other interested parties, related to environmental aspects,
- the education, training and adequate qualifications of employees,
- inform all participants in the business process with the Environmental Policy,
- the provision of financial and other resources for the implementation of environmental programs.

RESPONSIBILITY OF EMPLOYEES

Every employee is personally responsible for:

- strict compliance with internal environmental procedures and instructions,
- prudent and rational use of energy and raw materials,
- strict separation of produced waste and disposal at designated locations,
- continuous search for opportunities to reduce consumption of energy and raw materials.

Environmental Policy of the company is being periodically reviewed and updated when needed.
